TECHNOLOGIES

SPECIFICATION
EF-24 PASSENGER

Our high-speed passenger ferry provides a cost-effective public transport solution that helps address air pollution, congestion, and noise. A game changing solution that encourages multimodal transport in urban areas, enabling cities around the world to utilise and benefit from the untapped potential of their waterways.

FUTURE OF MARITIME TRANSPORT

38kts Top Speed	115nm Range at 25kts	3 Crew	150 Passengers	100% Electric
---------------------------	--------------------------------	------------------	--------------------------	-------------------------

Introducing the future of high-speed maritime transport. The EF-24 Passenger is a cost-effective public transport solution that helps address air pollution, congestion, and noise. A game changing solution that encourages multimodal transport in urban areas, enabling cities around the world to utilise and benefit from the untapped potential of their waterways.

Leave No Trace

A cheaper solution to reducing congestion in busy cities worldwide, the minimal wake of the Artemis eFoiler® means our vessels can avoid local speed restrictions, significantly reducing journey time. Allowing for high-speed operations close to shore without causing damage to shorelines or anchored vessels.

Better For Business

The EF-24 Passenger delivers significant OPEX savings with minimal servicing in comparison to traditional diesel engines.

Premium Experience

Flying over the waves removes the usual bumpy ride and associated sea sickness while electric propulsion provides a quiet experience free from noise and air pollution.

POWERED BY ARTEMIS EFOILER®

Energy

Provide by a novel Artemis Technologies modular marinised battery developed from proven automotive grade battery cell technology.

Steering System

Aft foil is the rudder and primary steering system. Independent propulsion units and thrusters compliment control for low speed manoeuvring.

Hydrofoils

Retractable high aspect ratio hydrofoils, with replaceable leading edges, that lift vessel out of the water reducing drag.

Propulsion

Zero emission propulsion provided by a self-cooled high power density electric drivetrain with minimal servicing requirements.

Collision Avoidance System

Identifies submerged and semi-submerged objects including wildlife.

Flight Control System

Ride height of the vessel is managed by an autonomous flight control system.

Comfortable Ride

Energy Savings

Quiet Performance

Zero Emissions

Minimal Wake

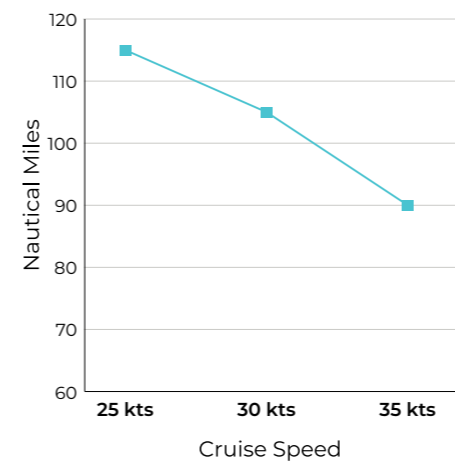

Significant OPEX Savings

100% Electric

Building on the launch of the company's 100% electric foiling workboat, the EF-24 Passenger is propelled by the patented Artemis eFoiler® electric propulsion system enabling it to fly above the water, reducing fuel costs by up to 85% compared with conventional high-speed diesel ferries.

EF-24 Passenger Foiling Range

Unrivalled Performance

With a take off speed of 18 knots and a top speed of 38 knots, the EF-24 Passenger ferry offers an unrivalled foiling range of 115 nautical miles at a 25 knots cruise speed.

Cutting edge foil design optimises efficiency and performance.

Artemis Technologies® propelled 100% electric workboat operating in Belfast Harbour.

PREMIUM PASSENGER COMFORT

Fully accessible with a range of facilities on board including bike racks, cabin bag and overhead storage, baby changing facilities, and seat charging points, offering a pathway to greener maritime transport around the world.

The EF-24 Passenger has a modern, bright and inviting interior for 150 passengers including two disabled seats and space for pushchairs.

With ample space onboard, the vessel can carry up to 18 bikes depending on customer specification.

AN ELEVATED EXPERIENCE

With front and side loading capability, and flexible general arrangement options, this vessel can serve a wide range of customer requirements.

The innovative design was driven by the requirement to optimise aerodynamic performance and reduce drag as the vessel moves through the air.

PRINCIPLE DIMENSIONS		PERFORMANCE	
Length Overall (m)	24	Top Speed	38 Knots
Beam Overall (m)	11	Cruise Speed	32 Knots
Draft (m)	3	Foiling Range	115 Nautical Miles
Draft (m) Foils Retracted	1.8	Passengers	150
Air Draft (m)	6.5	Bike Storage	18
Displacement - Lightweight (t)	50		
Displacement - Maximum (t)	70		
Crew / Bridge Seated Capacity	3		

Cheaper to Operate

Our high-speed passenger ferry provides a cost-effective public transport solution that competes with road and rail. Compared to a conventional high-speed diesel ferry, the EF-24 has a much lower OPEX due to the increased energy efficiency and reduced maintenance costs.

The below graphs compare the EF-24 Passenger ferry with a modern high-speed diesel ferry. When operating at a 35 knots average cruise speed for 200 nautical miles per day, 350 days per year, fuel savings will amount to £2.6 million, and also prevents the release of 8,000 tonnes CO₂e for the same 200 nautical mile a day duty cycle.

This is based on data from the Department for Business, Energy and Industrial Strategy, and conservative assumptions on the tariff of diesels (0.91£/L) and electricity (0.17£/kWh).

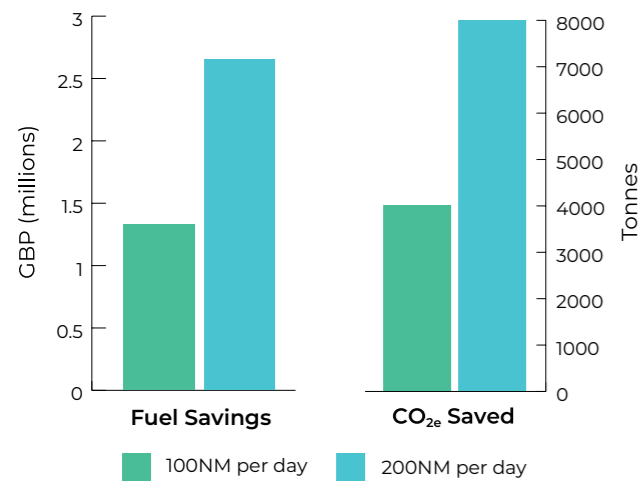

Condor Ferries

The first EF-24 Passenger ferry will be operated by Condor Ferries in 2024, servicing a route between Belfast and Bangor, in Northern Ireland.

Condor Ferries are a leading operator of passenger and freight ferry services across mainland UK, France and the Channel Islands

Annual Fuel & CO₂e Savings vs Diesel Ferry

Based on 350 days per year

15 Year TCO Comparison

Based on 200NM per day, 350 days per year
